Bulwark® garments are designed for continuous wear. They meet the flame resistance requirements specified in ASTM International Standard F2302-08 for labeling protective clothing as heat and flame-resistant. They also meet the performance requirements of National Fire Protection Association (NFPA) Standard 70E, *Electrical Safety Requirements for Employee Workplaces*, 2009 Edition, ASTM Standard F1506-08, *Flame-Resistant Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Electric Arc and Related Thermal Hazards*. Because these fabrics are flame-resistant, they are acceptable under the Occupational Safety & Health Administration (OSHA) Final Rule 1910.269, *Final Rule on Electrical Protective Equipment*. For complete information on these products, as well as laundering instructions, please visit bulwark.com.

Arc Ratings: Arc ratings are supplied to Bulwark based on testing by our fabric suppliers or from our own testing. Arc ratings are a statistical calculation of the 50% probability that a second degree burn will result from an electric arc exposure. As with all tests, some level of variation in ATPV test results is normal and expected among fabrics of identical fiber content and nominal weight. In order to assist end users with their hazard analysis by providing the most conservative ATPV, Bulwark will publish the lowest arc rating for that fabric weight in our catalog and on our garment label.

Product images shown here are photomechanically reproduced. As a result, colors may vary from actual fabric samples.
